STATUS OF THE CLAIMS

The status of the claims of the present application stands as follows:

1. **(Currently Amended)** A device, comprising:
 - a) an elongate resilient flexible member having a length and a longitudinal central axis and including at least a first set of indicia having a first plurality of indicia spaced from one another along said length; and
 - b) a spotter engaged with said elongate resilient flexible member and movable so as to be positionable to indicate any selected one of said first plurality of indicia, said spotter including a magnifier pivotable about a first pivot axis substantially parallel to said longitudinal central axis.
2. **(Original)** A device according to claim 1, wherein said elongate flexible member has a circumference and further includes a second set of indicia spaced from said first set of indicia around said circumference.
3. **(Original)** A device according to claim 1, wherein said device is used in conjunction with spotting a plurality of items and said first plurality of indicia correspond to said plurality of items.
4. **(Original)** A device according to claim 1, wherein each one of said first plurality of indicia includes at least one graphic.
5. **(Original)** A device according to claim 1, wherein each one of said first plurality of indicia comprises at least one word.
6. **(Original)** A device according to claim 1, wherein said spotter comprises a cavity slidably receiving a portion of said member therethrough.
7. **(Original)** A device according to claim 6, wherein said spotter and said member comprise complementary alignment structures operatively configured to inhibit rotation of said spotter relative to said elongate flexible member.

8. **(Original)** A device according to claim 1, wherein said spotter comprises a resilient portion that releasably engages said member when said resilient portion is compressed.
9. **(Original)** A device according to claim 1, wherein said spotter further comprises an indicator operatively configured for indicating in seriatim ones of said first plurality of indicia.
10. **(Original)** A device according to claim 9, wherein said indicator comprises an aperture in said spotter.
11. **(Original)** A device according to claim 9, wherein said indicator comprises a magnifying lens.
12. **(Original)** A device according to claim 9, wherein said spotter further comprises an illuminator for illuminating the one of said first plurality of indicia indicated by said indicator.
13. **(Original)** A device according to claim 1, wherein at least a portion of said spotter comprises an identifier.
14. **(Original)** A device according to claim 13, wherein said identifier is a travel destination identifier.
15. **(Original)** A device according to claim 1, wherein at least a portion of said spotter is configured like an animal or human.
16. **(Original)** A device according to claim 1, wherein said member includes a first end and a second end spaced from said first end and the device further includes a first end structure attached to said first end and a second end structure attached to said second end.
17. **(Original)** A device according to claim 16, wherein said first and second end structures are complementary connectors connectable to one another.
18. **(Original)** A device according to claim 16, further comprising a tracking system for tracking information regarding said indicia.

19. **(Original)** A device according to claim 18, wherein said member includes said information and said tracking system includes a reader operatively configured for reading said information from said member.

20. **(Canceled)**

21. **(Currently Amended)** A device according to claim ~~20~~1, wherein said magnifier is pivotable about a second pivot axis substantially perpendicular to said first pivot axis.

22. **(Currently Amended)** A device for use in conjunction with spotting a plurality of items, comprising:

- a) an elongate member having a length and a longitudinal central axis and including at least a first set of indicia having a first plurality of indicia spaced from one another along said length, wherein said first plurality of indicia correspond to the plurality of items; and
- b) a spotter movable relative to said elongate member and movable so as to be positionable to indicate any selected one of said first plurality of indicia, said spotter including a magnifier pivotable about a first pivot axis substantially parallel to said longitudinal central axis.

23. **(Original)** A device according to claim 22, further comprising a tracking system for tracking information regarding said indicia.

24. **(Original)** A device according to claim 23, wherein said member includes said information and said tracking system includes a reader operatively configured for reading said information from said member.

25. **(Canceled)**

26. **(Currently Amended)** A device according to claim ~~25~~22, wherein said magnifier is pivotable about a second pivot axis substantially perpendicular to said first pivot axis.

Claims 27-51: **(Canceled)**
